ACKNOWLEDGEMENT

We express our humbleness pranamas to his Holiness **Jagadguru Sri Sri Shivaratri Deshikendra Mahaswamiji** for showering his blessings on us to receive good education and have a successful career.

The completion of any project involves the efforts of many people. We have been lucky enough to have received a lot of support from all ends during the course of this project. So, we take this opportunity to express our gratitude to all whose guidance and encouraged helped us emerging successful.

We are thankful for the resourceful guidance, timely assistance and grateful gesture of our guide **Mrs. Shruti P and Mrs. B N Rashmi** Assistant Professor, Department of Computer Science and Engineering, who had helped us in every aspect of our project work.

We are also forever grateful to **Dr. Naveen N.C**, Head of the Department, Computer Science Engineering, for his unending support, guidance and encouragement in all our ventures.

We express our sincere thanks to our beloved Principal **Dr. Bhimasen Soragon** for having supported us in all our academic endeavours.

Last but not the least, we would be immensely pleased to express our heartfelt thanks to all teaching and non-teaching staff of the Department of CSE and our friends for their timely help, support and guidance.

Prithviraj Patil [1JS19CS125]

Kiran A [1JS19CS076]

ABSTRACT

Increased demand of restaurant-goers generated the need for much attention for the hospitality industry. Intrinsically ordering food through online food app has become an innate human tendency. Those vendors offering the food products and services through online food app have shown remarkable growth in the most recent years.

The Online Food Ordering System's main purpose is to maintain track of information such as Item Category, Food, Order, and Shopping Cart. It keeps track of information about the Item Category, the Customer, the Shopping Cart, and the Item Category. Only the administrator gets access to the project because it is totally built at the administrative level. The project's purpose is to develop software that will cut down on the time spent manually managing Item Category, Food, Customer, and Delivery Address. It saves the Order, and Shopping Cart information.

Technological interference has become mandatory to improve the quality of the service and business in this industry. Evidences are already existed for partial automation of food ordering process in the country; most of these technologies implemented are based on wireless technologies.
